

Sustainable Design Policy

SUSTAINABLE DESIGN POLICY

We strive for design excellence and sustainable environmental outcomes in all of our work and have created the following principles to encourage sustainability.

1. We consider the environmental implications of the work we are undertaking including the consumption of raw materials that might be required to fabricate or otherwise create the final outcome. We seek to mitigate the environmental cost of our design work by seeking to use materials that are sustainably sourced and/or locally produced.
2. We consider after-life dismantling and decommissioning of our work including disposal and potential for recycling. We seek to use materials that are biodegradable or recyclable.
3. We will not create work that relies on the consumption of materials that have been sourced from repressive states or harvested illegally.
4. We will not accept work from organisations involved in the destruction of the natural environment.

Thank-you
