## SUSTAINABLE COMMUNITY POLICY

POMO strives to contribute to the creation of sustainable communities in all its work. The following principles are adhered to by the organisation:

1. Sustainability is a combination of economic, environmental and social and all aspects of this matrix must be balanced in order to achieve true sustainability.
2. Social equity and inclusiveness including accessibility is a cornerstone of our design approach.
3. We have a responsibility to any community that we engage with to ensure their views are respected and they are provided with a meaningful opportunity to be heard.
4. We believe that public life, public realm and open space should be prioritised over private space and private consumption.
5. We believe in the power of cultural history and local identity and seek to preserve and promote these narratives in our work.
